

Concentrator Talk - January 13, 2022

#	<u>Question</u>	<u>Video Link</u>
1	Welcome and Introduction	Link
2	What does it mean if the oxygen concentrator ball keeps moving up and down in the flowmeter? Could it be a problem with the four-way valve?	Link
3	I want the team to talk about maintaining a unit -- weekly maintenance and what to do if the unit has an issue.	Link
4	I have a concentrator that I have been using for the past couple of years. All this time when adjusting the flow metre it took a few turns to get the ball to maximum flow, but now it takes a lot of turns to get to the maximum flow and when I open the flow metre all the way, the ball does not reach the top, it is just above the 5LPM mark, what could be the problem?	Link
5	How can one fix a noisy compressor?	Link
6	I have a DeVilbiss 525 Drive Black in colour, when I measure the oxygen purity its showing 21%. And there is some moisture in the flowmeter. What could be the problem?	Link
7	Is it right to leave water in the humidifier bottle when the concentrator is not in use?	Link
8	How many volts should a solenoid valve have?	Link
9	My 515 DeVilbiss concentrator starts to get hot after running for a few minutes. I can feel it when I touch the covers of the concentrator and the purity starts dropping rapidly. Any ideas what could be the problem?	Link
10	I have a Respironics Everflo concentrator that has been working perfectly and after turning it off, the next time I tried turning it on nothing was happening. Checked the power from the socket and it was there, what could be the problem here?	Link
11	I have an AirSep Newlife Intensity 10. The flowmeter ball does not go up past 5 LPM when I try to move the ball to 10 LPM. Any idea what is going on?	Link
12	I have a concentrator that has no brand written on it which I believe was manufactured in China. The model number that is written on the concentrator is DO2-5AM, The concentrator is working fine. I checked the purity and it's producing 92% at 5 LPM but the problem is the Low O2 light is "ON" despite the high purity. What could be the issue here?	Link

#	<u>Question</u>	<u>Video Link</u>
13	I have a Longfian unit. When I set it to 2 LPM it reads 95.6 but when i set it to 5 LPM, it reads less than 85, what can i do?	Link
14	What does it mean when I turn on the DeVilbiss 525 concentrator it starts running then I hear the compressor stop then start again after a few seconds then the service alarm comes on and the concentrator shuts down?	Link
15	I got an AirSep Elite concentrator as a donation from the US and after I turned it on the lights showed for about 1 second then everything went dead. What could be the problem?	Link
16	If one changes a compressor of 110v to 220v what will happen will the unit work?	Link
17	Closing Comments	Link
